Description

The Laboratory CLEA (EA-4296) of the University of Reims Champagne-Ardenne is pleased to welcome all attendees to the International Conference on Biological Understanding and Theory of Mind held in June, 3-5, 2009. This Conference was inspired by support from the French Agence Nationale de la Recherche (ANR) for our research program on childrens early biological conceptions. We have sought to bring together researchers who are well known for their work in the area with younger colleagues, particularly PhD students. Three specialists in conceptual development have accepted our invitation to give a plenary lecture: Susan Gelman on multiple explanatory models of illness, Simone Nguyen on food for thought and Michael Siegal on childrens conceptions of the edible-inedible distinction. We are very grateful for their participation.

This work was inspired by Freud's theory even if the anthropologist didn't. Christina Toren (1990) studied Fijian children's growing understanding of the . Two landmark volumes are Levi-Strauss' *The Savage Mind* (*Le Pensee ...* *The Bioarchaeology of Children: Perspectives from Biological and Forensic Anthropology*).

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be unique and offer a clear value proposition. The third step is to create a prototype, which allows the team to test the concept and gather feedback from potential users. Finally, the product is refined based on this feedback and then launched into the market. Throughout this process, it is crucial to maintain open communication with the target audience and be prepared to iterate on the design as needed.
